Emergency Mustering

Savance Health Patient Tracking & Flow is a comprehensive and easy-to-use solution that helps hospitals and other healthcare facilities improve the effectiveness and efficiency of workflow processes and clinical procedures. Easily identify and eliminate bottlenecks for better patient throughput; decreased wait times; and higher patient satisfaction ratings.

PATIENT TRACKING & FLOW

Donna Yoshida
Valley Children’s Hospital

We were able to cut wait times by an average of 15 minutes, improve the registration time by 4 minutes, and reduce the overall visit by 20 minutes on average.

Anyone who has been a patient is likely familiar with the long wait times that come with the simplest of procedures. It is frustrating to wait a long time for something as simple as a blood draw, and this can have a negative effect on the overall patient experience.

Savance Health Patient Tracking & Flow gets down to the heart of problems quickly and easily. You can track patients as they move through the facility, and determine the amount of time spent in each area. Easily collect the data needed to identify and eliminate bottlenecks in workflows, clinical procedures, staff resources, and more. You’ll be alerted of areas that are clogged, slow, or in other ways lacking the resources to manage patient flow.

By use of RTLS technology, you can automate both location tracking and the collection of patient flow data. Every stage in the clinical workflow is logged and tracked, eliminating the need for staff to manually document the process, allowing for more time spent on patient care.

Select Benefits

• Improve and automate patient flow data collection.
• Easily identify and eliminate bottlenecks to improve workflow and patient satisfaction.
• Optimize processes to reduce patient wait times and overall time investment.
• Achieve better efficiency by eliminating time spent manually tracking down patients.
• Automatically update patient statuses and other fields based on location.
